Professional Summary

Flutter Developer with hands-on experience building a full healthtech product end-to-end. As Founding Engineer at VisionOptoCare, I own the entire Flutter codebase (web, iOS, Android) for a platform that digitizes eye testing via smartphone for clinics and everyday users, currently in clinical trials ahead of launch, aiming to turn a slow, equipment-heavy process into something fast and accessible. I'm driven by real-world problems: I built an automated expense tracker after getting frustrated with manual entry, and a self-updating portfolio because I didn't want to maintain one by hand. I use AI-assisted tools like Antigravity and Cursor to move faster without cutting corners on code quality. Looking to join a product-focused team where I can keep solving practical problems and grow under experienced senior Flutter developers.

Skills

Programming Languages: Dart, C, C++, SQL

Libraries and Frameworks: Flutter, REST APIs, HTTP, Dio, Provider, SQLite, SharedPreferences, Video SDKs

Cloud & Backend: Firebase, Amazon Web Services (AWS), Firestore, Cloud Storage

Dev Tools: Antigravity, Cursor, AI-Assisted Development, Git, VS Code, Android Studio, Swagger, Android SDK

Domain: Health Tech, Full-Stack Product Development, R&D, Healthcare Data Compliance

Soft Skills: Leadership, Problem Solving, Team Collaboration, Communication, Quick Learning, Teaching

Languages: English (Fluent), Malayalam (Native), Hindi (Conversational), Tamil (Conversational)

Experience

VisionOptoCare, Flutter Developer – Founding Engineer

Mumbai, Maharashtra
(On-site)
December 2025 – Present

- Sole developer building the complete Flutter product (web, iOS, Android, desktop from a single codebase) to digitize eye testing using a smartphone, designed for both clinics and individual users; currently pre-launch and undergoing clinical trials
- Own the full development lifecycle end-to-end: research, prototyping, implementation, and testing, with no other engineers on the team
- Built automated diagnostic and report-generation systems that process clinical test data into structured, shareable reports
- Designed and integrated APIs for video-based remote eye consultations, built to extend access to underserved users once launched
- Implemented healthcare data security practices in line with compliance requirements
- Translated clinical and medical requirements from doctors into working technical features
- Built and maintain the company website (visionoptocare.com) introducing the product and company
- Tech stack: Flutter, Dart, REST APIs, Video SDKs, Firebase, AWS, Git

Luminar Technolab, Flutter Developer Trainee

Kochi, Kerala
June 2025 – December 2025

- Built Flutter mobile apps with a focus on clean UI design and smooth performance
- Wrote maintainable code following best practices while collaborating with a team

- Gained experience with state management patterns like Provider and REST API integration using Http and Dio

Projects

Buddy – Auto Expense Tracker with Notification Reading

- Built an expense tracker that automatically reads transaction SMS and UPI notifications to add expenses without manual entry
- Runs a background listener service with regex-based parsing to extract amount, sender, UPI ID and timestamp
- Implemented duplicate prevention using notification hashing and time-window checks
- Added analytics with daily, weekly, monthly charts using FL Chart
- Used SQLite for offline storage and added PDF export for summaries
- Tech stack: Flutter, Dart, SQLite, Background Services, FL Chart

AI-Powered Self-Updating Portfolio (GitHub + Gemini API Integration)

- Automatically fetches repositories using GitHub API and generates summaries via Google Gemini
- Firestore-based secure token storage ensures no API keys ever appear in code
- Intelligent scoring filters hide practice repos and highlight high-quality ones
- Dynamic project cards update instantly when new repos are pushed to GitHub
- Clean, responsive UI with smooth animations and organized sections
- Tech stack: Flutter Web, Firebase, GitHub API, Google Generative AI

faysarukattil.github.io 

Instagram Clone

- Replicated core features: Feed, Reels, Search, Chat, Stories and Profile
- Added auto-play reels, pinch-to-zoom images, and smooth video interactions
- Camera + gallery support for creating and sharing posts, reels, and stories
- Local persistence using SharedPreferences for likes, posts, comments, and user data
- Real-time chat UI with message status and explore page with staggered grid
- Tech stack: Flutter, Dart, Video Player, Camera, SharedPreferences

Education

B.Tech MES College of Engineering, Kuttippuram,

June 2021 – April 2025

- Studied core CS subjects like Data Structures, Algorithms, OOPS, DBMS, and Software Engineering
- Served as Class Representative for four consecutive years throughout college
- Participated in technical workshops and coding competitions throughout college

Certifications

Flutter Development Training – Luminar Technolab, Kochi (Completed, December 2025)

B.Tech in Computer Science and Engineering – MES College of Engineering, Kuttippuram (2025)
